Dear Jim,

One of my correspondents plans to spend his vacation in the Archives. He projects working on the arrests, radio logs and Exhibit 111(16H482), where he will explore the possibility of coding.

Of this he says, "It is quite clear to me that these pages represent an example of cryptographic technique known as the Grille Cipher method".

Is there anything special you'd like him to look into? I have just learned that he is an authentic expert in the field and I am certain he'd like to be asked to use his skills and understanding for us.

I expect him to be in touch with me when he reaches Washington.

Sincerely,

Harold Weisberh
